

Name: _____ Date: _____

The Life Cycle of a Plant

All plants are living. They have a life cycle. Plants start as a seed. The seed is planted in the ground.

Soon the seed begins to grow. Roots grow down into the soil. These roots will help get water for the plant.

A seedling is a baby plant. It grows leaves. The leaves help the plant begin to make food from air and water. Soon it will grow into a bigger plant. Seeds from different plants will grow to be different adult plants.

An adult plant starts to form. It can grow flowers or fruits. New seeds are made. These seeds can then be spread and planted. The life cycle begins again.
